

HighJump Data Collection Advantage

“HIGHJUMP SOFTWARE’S PARTNERSHIP WITH PEOPLESOFT GUARANTEED BOTH TIGHT INTEGRATION WITH OUR EXISTING SYSTEM AND FUTURE EXPANDABILITY TO NEW VERSIONS OF THE PEOPLESOFT ERP.”

—Steve Cochrane, SGS Tool Company, PeopleSoft User director of IT

Partnering to Extend Your ERP

“The business problem we wanted to resolve was basically to come up with a manufacturing shop floor solution that would easily integrate with the enterprise environment and allow us to expand functionality across the worldwide Lennox manufacturing organization. Currently we’re planning to implement the HighJump system in 13 North American manufacturing facilities, all integrated back into the centralized SAP solution.”

—Pat Ryan, Lennox International Inc., SAP User manufacturing shop floor IT manager

“The way you can set up and tailor HighJump Data Collection Advantage is a huge benefit. If something in our system is not looking or acting like we want it to, 10 minutes later it is—and we make the changes on our own.”

—Alan Burks, Hitachi Data Systems, Oracle User senior director of global logistics

From Intelligent Data Capture to Total Business Improvement

For manufacturing and distribution operations, accurate production and inventory tracking is fundamental for success. Because you can’t effectively manage your operation if you don’t have visibility over it, you need a nimble inventory execution tool working in concert with your enterprise resource planning (ERP) system.

The HighJump™ Data Collection Advantage solution is a robust, real-time, easily configurable data collection application that delivers out-of-the-box functionality while providing tools that allow for rapid tailoring—without the cost and risk associated with custom programming and lengthy consulting engagements.

Designed to be your real-time data collection hub, HighJump Data Collection Advantage is an easy-to-use, intuitive solution that runs on Microsoft® Windows® Server technology. This powerful application extends your ERP by utilizing radio frequency devices, bar code scanning, touch screens/PC workstations, RFID and the Web to improve your operations.

Unleash the Power of Your ERP – In Manufacturing and Distribution

HighJump Data Collection Advantage helps you strengthen your ERP investment by seamlessly automating, error-proofing and streamlining inventory and manufacturing-related processes in real time, and by providing advanced visibility into critical areas such as inventory status and availability, work order status and on-time shipments.

HighJump Software offers certified, proven and affordable packaged solutions for ERPs such as Oracle®, PeopleSoft®, SAP®, Infor® and Visibility®. HighJump Data Collection Advantage can also be configured to support nearly any legacy or custom business system.

Key Benefits for the Warehouse

- Work order picking
- Shop floor labor
- Scrap/production reporting
- Lot and serial number control
- Sales order picking
- Ship confirmation
- Performance reporting
- Inventory reporting
- Barcode label printing

User and Web Dashboard Interfaces

Depending on your specific requirements, a variety of user interface options are available with HighJump Data Collection Advantage. The most common user interface includes mobile wireless data collection devices from suppliers such as Intermec, Symbol, LXE or Psion Teklogix.

Our shop floor touch screen/PC and Web dashboard interfaces are optional choices for streamlining the collection and flow of critical information, as well as simplifying the reporting and viewing of information in real time.

Adaptability – The Hallmark of HighJump Data Collection Advantage

HighJump Data Collection Advantage empowers you to transform and differentiate your business in new ways to continually add value to your business processes—and to your bottom line. The ability to quickly make changes as necessary helps you keep up with new requirements as your company grows and changes.
