## Powering the Food and Beverage Industry From Supplier to Store Shelf

What path do the components in your food and beverage products travel before ending up on the store shelf? Do you know exactly where every pallet of tomatoes, every sack of flour and every can of beer or soda came from and where it is now? Could you trace the exact path of a product in the event of a recall?

Food and beverage distributors lacking precise and seamless traceability, lot control and recall management capabilities jeopardize food safety and put their businesses at risk of compliance failure and legal liability.

**HighJump stands out in the food and beverage industry. So can you.**

Many of today's best-known food and beverage brands trust HighJump Software for supply chain management and visibility. Why? Because HighJump supports the requirements of the food and beverage industry with advanced inventory management capabilities and real-time visibility to critical information from the supplier to the store shelf, and all locations in-between. This level of material and inventory control allows our customers to focus energies on expanding their businesses and building new efficiencies into their processes. That's why HighJump customers are among the best in the industry.

HighJump is committed to keeping our entire line of products in-step with customer and industry requirements so that you'll never need to worry about a technology barrier to food safety.

### Last-Mile Delivery

HighJump helps you integrate selling, marketing and last-mile delivery efforts across your organization. The HighJump mobile delivery system combines order processing, delivery, off-truck sales, invoice management and comprehensive settlement capabilities to streamline daily delivery activities and help improve customer satisfaction for both independent operator and company routes. And by equipping your sales team with tools for immediate access to up-to-date order and customer information, you can transform order takers into sales consultants.

### Manufacturing and Production

HighJump's manufacturing execution system (MES), HighJump™ Manufacturing Advantage, includes advanced trace-

“Using HighJump we can look up an item and see how much we have on-hand, when it was last received, when it was shipped, the last person who touched it, where they put it and any abnormal changes or adjustments that were made.”

—Randy Simpson  
Distribution Manager, Major Brands (wine and spirits distributor)

ability/genealogy and recall management tools. The system automatically creates a full genealogy of every product made as ingredients are issued to the batch and completions are recorded, tying batch numbers, lot numbers or other data to the appropriate finished products, as well as back to the production order or demand signal. HighJump Manufacturing Advantage also drives production reporting and quality inspections. This leads to fewer defective products making it through the production process.

### Warehouse Management

HighJump understands warehouse management as well as any provider in the world. The HighJump warehouse management system (WMS) can manage even the most highly-regulated and complex distribution environments. HighJump provides the means to ensure fast, accurate fulfillment through directed, optimized workflow. The HighJump warehouse management system gives food and beverage businesses a foundation of best practices for receiving, put-away/flow-through, inventory management, order processing, replenishment/pick/pack, loading and shipping, as well as the ability to build their own industry-leading businesses processes using our adaptability tools.

### Transportation Management

HighJump's transportation management system (TMS) simplifies the complex and tedious daily routing task by using sophisticated optimization algorithms that provide a least-cost solution while helping to ensure your routing requirements are met. The HighJump TMS offers

significant transportation cost savings and improved customer service levels through process automation and visibility. HighJump transportation management is used daily by Fortune 500 companies to optimize routing decisions.

### Supplier Enablement

HighJump™ Supplier Advantage empowers you to dramatically increase the speed of receiving operations, lower inventory levels and push work such as labeling to your suppliers—whether they're around the corner or across the ocean. A secure Web portal provides the basis for real-time information sharing and improved inventory visibility, critical factors in enhancing collaboration and streamlining supply chain operations. Achieving and maintaining collaboration between your distribution center and your supplier network reduces cycle times through real-time communication of demand, order status and potential exceptions.

### HighJump Speaks Your ERP's Language

HighJump solutions are designed to complement your existing ERP and ensure you get the most value from your ERP system. You can rely on HighJump's system integration expertise to help ensure a successful implementation and strong ROI. Our professional services team is versed in food and beverage industry requirements as well as how to make sure data is flowing smoothly between HighJump and your ERP. And HighJump's extremely adaptable system architecture allows for extensive personalization without any code-based changes.
